The Rejected Stone.

I have heard a story-I cannot tell whethsame has became the headstone of the corner." It is said that when Solomon's temple was building all the stones were brough from the quarry, ready cut and fashioned, and there was marked on all the blocks the five per cent., closing at the highest rate. ed of no describable shape, it appeared un-The only value of the stock, it appears, lies fit for any portion of the building. They in the hope of the sanguine purchasers that tried it at this wall but it would not fit; they tried it in another, but it could not be accomplished; so, vexed and angry, they threw it away. The temple was so many years building that the stone became covered with mess, and grass grew around it. Every-body passed by laughed at the stone; they body passed by laughed at the stone; they said Solomon was wise, and doubtless all Wool Nett Jackets for girls, something nice; some of the nicest Linsey Plaids for children you have the other stones was right; but as for that block, they might as well send it back to Infants Cloaks, Capes and Hoods, and many new the quarry, for it was meant for nothing. Goods in our line. Call and see them for yourself. Year after year rolled on, and the poor stone was still despised; the builders constantly refused it. The eventful day came when the temple was to be finished and opened, and the multitude was assembled to see the sight. The builders said, "Where is the topstone? Where is the pinnacle?" They was, until one said, "Perhaps that stone earth was so slow that there was no loss of up, the ground ought to be stirred, either which the the builders refused is meant to life, but the destruction of property was with a cultivator, or in a small patch with be the topstone." They then took it, and hoisted it to the top of the house; and as it adapted to the place. Loud hosannas made has been greater and not less preceptible be- and ought to be done with care. The ridges the welkin ring, as the stone which the cuase unmarked by extensive caving like ought to be made large enough, so that no builders refused thus became the headstone The builders cast him away. New Jersey.

In the Albany Law Journal we find these little chirpings: "The remarks of an exchange, 'that many

and all nations shall be blessed in him, yea, preachers,' is gracefully corrected by one of posing the tubers a few days to the sun and the legal gentlemen referred to, who begs after that cover the potatoes partially with about to enter judgment in a certain case, them always.

that he had not jurisdiction on account of the amount involved being over two hun-The use of this Guano in this and adjoining States dred dollars, promptly responded: "The Court has thought of that, and discovered a remedy. The Court will enter judgment for the full amount, and then issue two executions, each for a half.'

In a recent action against the corporation of Canterbury, England, to recover damages for injuries received by the plaintiff, he having been thrown from his carriage in the night time by coming in contact with a pile of stones left in the highway, the somewhat singular defence was set up that 'the accident would not have occurred in the day time, and that, as darkness was the act of God, so was the accident.' The Lord Chief Justice is said to have ruled against this point with some warmth.

Some years since, while a judge, who now occupies a very high judicial position in the State, was holding circuit court in one of the western counties, a case of trivial character was called on. His honor, somewhat 'riled,' remarked that such suits, instead of taking up the time of the court, would be more properly disposed of by submitting the same to a jury of old women. The plaintiff's attorney quietly replied, that, without taking exception to the opinion of the honorable court, he thought his cause could not have been before a more appropriate tribunal."

"Sambo, is your master a good farmer?" "Oh, yes, massa fuss-rate farmer; he make two crops in one year."

"How is that, Sambo?" "Why, he sell all his hay in the fall, and make money once; den in de spring he sell de hides of de cattle dat die for want of de hay, and make money twice."

G. H., Summit, Mississippi.

Sandy Soils and their Management. The character and treatment of sandy soils, are in almost every particular the reverse of those of clay. They do not possess and one seventh yards in breadth. This the property of adhesiveness, and they have but little amnity for water, which escapes from them almost as soon as it falls. They have but a slight hold upon the manures which are diffused through them; they are loose in their texture, and may be plowed at any time with equal advantage, provided the sowing or planting is to follow imme-

As elay soils are much benefitted by a mixture of sand, so likewise are sandy soils to the Scottish acre. The Irish acre is seven greatly improved by the addition of clay, thousand eight hundred and forty square yet in a much higher degree; for though it would never pay, as a general rule, to add sand to clay, yet the addition of a few loads of the stiffest clay to a light sand, would in almost every instance much more than compensate for the trouble and expense. For this purpose, the clay should be thinly spread in autumn upon sward land previousy plowed, and the winter's frost will effectbe harrowed thoroughly and deeply in the spring, and subsequently plowed if neces-

Such a dressing on a light, crawling land is more than equivalent to any equal quantity of the best manure, and will be permasary to each other as they contain qualities which are essential to a good soil; and that the proper proportion of each.

Sandy soils are improved by the frequent use of a heavy roller; it cannot be used too often. They require to be made more compact, and any treatment that secures this object, will be advantageous.

stitutents of soils, while it separates clay, the doctor began to cough. renders sand more adhesive; and when "Why, doctor," said the sextion, "you cheaply obtained, it is always a profitable have got a cold. Note or Account are requested to come forward and

lar to sand, but much less desirable, being appropriately termed hungry. They are also like the latter, peculiarly leachy, but in an increased degree, permitting the rapid escape of manures, both by evaporation and drainage. Such as are calcareous or com-State of Labrador many look across the on the minds of the freedmen to follow posed of lime stone pebbles, are in a great the disposing affinities of the lime (of enough will be found to exist in the soil in a finely comminuted or divided state, which in this condition is enabled to act sufficiently) have a tendency to retain the vegetable matters, thus compacting the soil, and holding what-ever pubulum, or food of plants, may from time to time be given to it for the wants of future crops. Unless of this latter description, graverly soils should not be subjected to tillage; but appropriated to pasturage, when sheep will keep them in the best and most profitable condition of which they are

Loamy soils, being intermediate between elay and sand, possess characteristics and require a treatment approximating to one or the other, according to the predominance of either quality. They are among the most desirable soils for the various purposes of agriculture .- American Farm Book.

IRON AROUND PEACH TREES,-At a recent meeting of the American Institute Farmers Club, Mr. Wagner, who lives on Long Island Sound, about fifty miles east of New York, exhibited some pruning from his orchard to illustrate the effect of putting iron around trees. He took an old place with twenty trees in the orchard, full of dead limbs, with yellow leaves, and the crotches oozing thick gum. He gave the earth a good top dressing of iron, breaking up old plows and scattering the fragments. The effect has been marvelous. The trees have renewed their youth, and now look strong and thrifty. The bark is tight and leaves are green, and the borer has disappeared. He thinks the slag of iron furnaces, ground very valuable fertilizer for fruit trees of all kinds.

Acre. - An acre is a quantity of land containing one hundred and sixty square rods or perches; four thousand eight hundred and forty square yards; and forty-three thousand, five hundred and sixty square feet. This is the English statute acre. In measuring an acre by yards, the usual practice is to trace off seventy yards in length and seventy in width; this in a rough way may be considered near enough for most practical purposes in laying out a farm; but as seventy yards each way make four thousand nine hundred yards, they exceed one acre by fifty square yards. To determine an accurate acre, it should be measured seventy yards in length by sixty-nine will be an acre wanting a few inches. Still greater accuracy will be attained by measuring off two hundred and nine feet one way and two hundred and eight feet five and one eight inches the other. This will be precisely a square acre, or exceeding it only two-sevenths of a square foot. The acre of Scotland contains six thousand one hundred and fifty-one and two-fifths square yards. The French arpent or acre is nearly equal

BE A MAN .- Foolish spending is the father of poverty. Do not be ashamed of work, and hard work. Work for best salaries or wages you can get, but work for half price rather than be idle. Be your own master, and do not let society or fashion swallow up your individuality-hat, coat ually separate the particles. It should then and boots. Do not eat up or wear out all you earn. Compel your selfish body to spare something for profits saved. Be stingy to your own appetite, but merciful to others' necessities. Help others and ask no help for yourself. See that you are proud. Let your pride be of the right kind. nent in its effects. Clay and sand are neces- Be too proud to be lazy; too proud to give up without conquering every difficulty; too proud to wear a coat that you cannot afford will always be found the best, which has to buy; too proud to be in company that you cannot keep with in expenses; too proud to lie, or steel or cheat; too proud to be stingy.
